"Identification of an essential tyrosine residue in the catalytic site of a chitinase isolated from Zea mays that is selectively modified during inactivation with 1-ethyl-3-(3-dimethylaminopropyl)-carbodiimide.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- SIMILARITY: Belongs to the glycosyl hydrolase 19 family. Chitinase class I subfamily.
-!- SIMILARITY: Contains 1 chitin-binding type-1 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "Antifungal proteins from plants. Purification, molecular cloning, and antifungal properties of chitinases from maize seed.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE-92202208; PubMed=1551872;

Biol. Chem. 267:3886-3893 (1992).
--- FUNCTION: This protein functions as a defense against chitin containing fungal pathogens.
--- CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of Nacetyl-D-glucosamine polymers of chitin.
--- MISCELLANBOUS: Maize chitinase B seems to be less active than
                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-DEC-1992 (Rel. 24, Created)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6133507
GENERAL INFORMATION:
APPLICANT: Raikhel, Natasha V.
TITLE OF INVENTION: Nettle Lectin cDNA
FILE REFERENCE: MSU 4.1-114
CURRENT APPLICATION WUMBER: US/07/791,931C
CURRENT FILING DATE: 1991-11-12
GUNBER OF SEQ ID NOS: 19
SOFTWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ; Sequence 8, Application US/07704288C; Patent No. 5399680; GENERAL INFORMATION:

GENERAL INFORMATION:
APPLICANT: DUBOIS, Michel
APPLICANT: DEGINAL, Jean-Jacques
APPLICANT: PIGNARD, Annie
APPLICANT: TOPPAN, Alain
TITLE OF INVENTION: Recombinant gene coding for a protein
TITLE OF INVENTION: having endochitinase activity or for a precursor thereof.
CORRESPONDENCE ADDRESS:
ADDRESSEE: Foley & Lardner
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   115

Chitinase; plant resistance; fungus; nematode; Fusarium; Heterodera. New chitinase polynucleotides and polypeptides, useful in producing plants with enhanced resistance against a fungus or a nematode. Yalpani N; ADS92628 standard; protein; 257 AA True I, Simmons CR, Chitinase variant polypeptide #5. (VERD-) VERDIA INC. The invention relates to chitinase polypeptides and the polymucleotides encoding them. A method of enhancing plant resistance to a fungus or mematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polymucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Fusarium. The nematode is from the genus Heterodera. The polymucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to chitinase polypeptides and the polynucleotides encoding them. A method of enhancing plant resistance to a fungus or nematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polynucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Fusarium. The nematode is from the genus Heterodera. The polynucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to chitinase polypeptides and the polymucleotides encoding them. A method of enhancing plant resistance to a fungus or mematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polymucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Pusarium. The nematode is from the genus Heterodera. The polymucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.

A method of enhancing plant resistance to a fungus or nematode comprises introducing into a plant a recombinant expression cassette comprishing a promoter operably linked to a chitinase polynucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Pusarium. The nematode is from the genus Heterodera. The polynucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to chitinase polypeptides and the polynucleotides encoding them. A method of enhancing plant resistance to a fungus or nematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polynucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Pusarium. The nematode is from the genus Heterodera. The polynucleotides and polypeptides are useful in enhancing

A method of enhancing plant resistance to a fungus or nematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polynucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Pusarium. The nematode is from the genus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to chitinase polypeptides and the polymucleotides encoding them. A method of enhancing plant resistance to a fungus or nematode comprises introducing into a plant a recombinant expression cassette comprising a promoter operably linked to a chitinase polymucleotide of the invention. The plant is maize or soybean. The

 fungus is from the genus Pusarium. The nematode is from the genus theteroderar. The polynuclectides and polynpeptides are useful in enha plant resistance to a fungus or nematode. This sequence represents chitinase variant polypeptide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      119
polynucleotide of the invention. The plant is maize or soybean. The fungus is from the genus Fusarium. The nematode is from the genus Heteroderar. The polynucleotides and polypeptides are useful in enhancing plant resistance to a fungus or nematode. This sequence represents a chitinase variant polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                  9
